U.S.S.N. 08/933,792 KÖSTER, et al. AMENDMENT

The kit of claim 18, wherein the bead is made from material selected from the group consisting of silica gel, glass, magnet, p-benzyloxybenzyl alcohol copolystyrene-divinyl benzene (DVB) resin, chlorotritylchloride copolystyrene-DVB resin, chloromethylated copolystyrene-DVB resin, metal, plastic, cellulose, cross-linked dextran, and agarose gel.—

and further conjugated to a nucleic acid, wherein conjugation effected with a crosslinking agent.

The method of claim &, wherein conjugation effected with a crosslinking agent.

-26. A composition, comprising a bead conjugated to a solid support and further conjugated to a nucleic acid molecule comprising protein nucleic acid.—

A composition, comprising a bead conjugated to a solid support and further conjugated to a nucleic acid, wherein conjugation is effected through a photocleavable linkage.—

Exposure to a laser. —

The composition of claim 21, wherein the linkage is cleaved by exposure to electromagnetic radiation selected from ultravioltet, visible, infrared radiation or electromagnetic radiation generated by fluorescence or chemiluminescence, or combinations thereof.—

A composition, comprising a bead conjugated to a solid support and further conjugated to a nucleic acid, wherein conjugation is effected through ionic linkages.—

Please amend claims 1 and 9 as follows:

1. (Amended) A composition, comprising a bead conjugated to a solid support and further conjugated to a nucleic acid, wherein the solid support is
